## DETAILED ACTION

### *Claim Objections*

1. Claims 10-20 are objected to because of the following informalities:

The word "transistor" (claim 10, line 7) should be "transistors" and the word "the" in "the voltage" (claim 10, lines 7-8) should be "a". Appropriate correction is required.

### *Claim Rejections - 35 USC § 112*

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 10-20 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01. The omitted structural cooperative relationships are the connection between the bias generator and any of other elements

4. Claims 10-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The phrase "one of the mirror transistor outputs" (claim 10, line 4) is confusing since there is only one mirror transistor output recited in line 3.

***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims 1-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Lemus et al..

Lemus et al. discloses a method to adjust an operating parameter of a magnetoresistive random access memory having a tunable circuit comprising all the steps as recited in claims 1-9 as follows:

measuring the operating parameter of the magnetoresistive random access memory to obtain a measured operating parameter result (paragraph [0028]);

tuning a tunable circuit (sense amplifier 36, paragraph [0053]) based on the measured operating parameter result;

tuning the tunable circuit comprising tuning by tuning a bias control circuit (offset calibration system 120, paragraph [0054] and paragraph [0060], lines 9-18);

measuring the operating parameter in the forms of a word reference current or in the forms of a sense reference current (paragraph [0029]);

Regarding claim 5-9, the plurality of magnetic random access memories and the plurality of tunable circuits are disclosed in paragraphs [0017], lines 9-10, [0030], and [0031].

***Allowable Subject Matter***

7. Claim 10 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

8. Claims 11-20 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

The prior art does not teach or suggest the detailed biasing tuning circuit as recited in claim 10.
